

**Assoc.Prof.Dr. Sukree Hajisamae**

Prince of Songkla University, Pattani Campus, Thailand

**Education**

M.Sc. (Fishery Technology)

Ph.D. (Biological Science)

**Area of interest**

His research focus is mainly on ecology of aquatic fauna in estuarine habitats particularly on fish and trophic ecology relevant to environmental aspects of the habitat. He is also particular interest in holistic study of a semi-enclosed ecosystem, considered as key biodiversity area (KBA) where both sciences and social sciences integrated to optimize utilization of biological resources. Integration and participation of relevant stakeholders, especially community living around that area, to manage and sustainably utilize the habitat is his special interest. Assessing anthropogenic impacts on the ecosystems along coastal areas is another angle of his current work. He has published more than 40 papers internationally and regionally and three books.
